Spanish SME is seeking a partner specialised in recycled aggregates for a LIFE programme consortium on circular asphalt solutions. A Spanish SME in the construction sector is preparing a proposal under the LIFE Programme focused on the valorisation of industrial waste and organic by-products as rejuvenating agents for aged bitumen in recycled asphalt mixtures. The project aims to enhance mechanical performance while reducing environmental impact in line with circular economy principles. The consortium is looking for a partner specialised in construction waste management & the production of high-performance recycled aggregates

Краен срок за проявяване на интерес: **27.07.2026 г.**

A Turkish-led consortium seeks partners for AI-supported deep-sea biodiversity monitoring and community-based marine conservation. A Turkish-led consortium is seeking partners for Horizon Europe Mission Ocean 2026 calls. The DEEP-MED project will deploy cost-effective Edge-AI-powered ROV/BRUV hybrid systems rated to 1000 m for deep-sea biodiversity monitoring and marine conservation. The consortium seeks marine research institutes, fisher cooperatives, coastal municipalities, South-Mediterranean partners and blue-economy SMEs.

SME partner sought to test application of innovative, sustainable and high-performance wax-based lubricants in applications such as agricultural machinery, conveyor belts, motorcycling or outboard motors within a EUROSTARS project. A German startup with backgrounds in nanochemistry develops innovative wax-based lubricants with first products on the market for bicycle chains. The patented technology removes oil and applies high-performance waxes in one step. Compared to fossil-based lubricants, this solution comes without contaminants and with up to 3 times longer durability. Pilot partners are sought for a common application to EUROSTARS to further develop and test the lubricants in a specific industrial application.

SOMARES Project — "Somatic Resonance: Embodied Intelligence and European Heritage" project partners sought in evaluation science, museum/heritage learning, sound practice, and arts/somatic methods for HORIZON-CL2-2026-01-HERITAGE-01. Yıldız Technical University (Türkiye) is coordinating SOMARES, a Horizon Europe Research and Innovation Action under preparation for the Artistic Intelligence call (HORIZON-CL2-2026-01-HERITAGE-01). The project develops and tests transferable arts-based methodologies for soft-skills development through embodied practice, listening, and participatory heritage learning. Partners sought. Submission: September 2026.

An Italian company seeks water utility to pilot a satellite-based decision-support service that reduces water-network losses — European Space Agency proof-of-concept project. A technology SME, operating in France and Italy, is developing a satellite-data decision engine that helps water utilities cut network water losses and target pipe-renewal spending. Under a European Space Agency proof-of-concept project, the company seeks a water utility to join as pilot end-user: providing a real network, validating results and shaping the commercial roll-out.

French wine cluster looking for partners to join a consortium for call HORIZON-CL6-2026-01-CIRCBIO-09 on balancing food security, bioeconomy, climate and biodiversity objectives to unlock sustainable value chains. A French wine innovation cluster is forming a consortium under the CIRCBIO-09 topic. They are looking for partners to complement and broaden their approach, which currently revolves around the development of bioeconomy through a dedicated wine-sector case study. The cluster and its current partners' added value lies in direct access to winegrowers and sector stakeholders, practical knowledge of biomass logistics and experience in collaborative innovation projects.

French start up look for partners under Horizon Europe program (extraction and purification of stable and functional organelles as a NAM). SME, spin-off from ENS-PSL, CNRS, based in Paris, France, provides isolated, functional organelles at scale via patented microfluidic process, compatible with high-throughput screening drug discovery platforms. Seeking academic & industrial partners for Horizon Europe, Eurostars, EIC Pathfinder consortia to expand lysosome, mitochondria and endoplasmic reticulum extraction to new cell types and develop organelle pharmacology and toxicology applications. Partners sought: cell biology, toxicology, drug discovery.

URGENT - ARTISTIC INTELLIGENCE FOR HUMAN CAPACITIES - HORIZON-CL2-2026-01-HERITAGE-01 AI-enhanced artistic practice to strengthen soft skills, critical thinking and adaptive leadership across education, work and society. Europe faces a measurable paradox: as Artificial Intelligence reshapes every sector of society, the human capacities most needed to navigate that transition — critical thinking, empathy, adaptive leadership and collaborative creativity — are precisely those that neither machines can substitute nor conventional training reliably develops. Traditional education and corporate learning programmes lack the methodology, the contents and the measurement tools to cultivate these transversal skills.

Within the scope of the call HORIZON-CL3-2026-01-DRS-01 a Turkish university acting as the coordinator, in collaboration with its partner chamber of industry, is seeking partners for its consortium. Under the HORIZON-CL3-2026-01-DRS-01 call, a Turkish university (coordinator) and its partner chamber of industry seek partners from universities, research centers, institutes, development agencies, industry, and chambers to join a consortium. Partners are expected to contribute to the consortium under the following key areas:

Industrial Data & Methodology Integration

AI & Business Interruption Modeling Support

Digital Twin Validation & Regional Pilot Execution

Policy & Exploitation Alignment

Partner search for Horizon Europe: Development of bio-based electrode materials for next-gen Sodium-Ion Batteries. The proposed project aims to: Utilize agricultural and marine biomass side-streams, specifically fungal mycelium, seaweed, and hemp-derived bio-carbon, to create high-performance electrode architectures. Overcome fundamental limitations in organic battery materials—namely low electrical conductivity and electrolyte solubility—by employing covalent "grafting" of quinone molecules (e.g., Lawsone) onto engineered, hierarchical porous carbon skeletons.
