Functional Immune-Ageing Biomarker Module – PBMC-based Lysosomal Stress Assay. Immune ageing (immunosenescence, inflammaging) is a central mechanism in age-related disease. Current biomarker strategies rely on static molecular or omics readouts. No standardised functional assay exists for measuring how immune cells actually process lysosomal stress and autophagic demand in patient-accessible blood cells (PBMCs). We develop such a functional assay and seek a complementary partner for the biomarker work package within an EIC Pathfinder Healthy-Ageing consortium.

EU LIFE Programme: Belgian SME seeks port, industrial site or water utility partner for a circular, decentralised and climate-adaptive water treatment project. LIFE-2026-SAP-ENV-ENVIRONMENT - Circular Economy and Zero Pollution. A Belgian water-tech scale-up specialised in decentralised, circular water and wastewater treatment is preparing a proposal for the EU LIFE programme (Circular Economy and Quality of Life, Water priority). The project will demonstrate modular, AI-enabled, chemical-free treatment and water-reuse technology at a new site within the EU and/or eligible countries. A partner able to host or co-develop the demonstration, such as a port authority, industrial site or public water utility, is sought.
